Digital radius gauge

High precision digital radius gauge

Especially designed for measuring radii on profiles.

The High precision digital radius gauge allows the user to have a direct and immediate reading of inner and outer radius in a range from 55 to 11.250 millimeters or from 2" to 443" inches.

The High precision digital radius gauge measures radii in spherical objects such as tubes, profiles and pipes in a quick and accurate way.

It is really fast and easy to use! It indicates the inner or outer radius of the part we are bending without removing it from the machine and without needing to previously draw and cut a guide template.

Non-Mandrel Pipe Benders

Non-mandrel pipe bender CC90

The new generation of CC90 non-mandrel pipe benders makes up to 180° curves on hollow pipes with the best finish, the greatest speed and thinner than other machines in the same category. Pipes may be round, oval, square, rectangular...made of different materials, iron, aluminum, stainless steel, copper...

Maximum working stroke: 88.9 mm or 3" Schedule 40 or 3" 1/2 Whitworth or 3" ISO x 6 mm.

Nargesa tube and pipes benders are controlled with a very intuitive and easy-to-use 7" color touchscreen with the latest 4.0 technology. **Just enter the pipe dimensions, thickness, angle of the curve or curves and choose a die from the library and the control programs the rest of the parameters automatically;** elastic recovery correction (springback), recommended rotation speed, whether a tool post support is necessary or not, and if the intended curve is possible... All of this may be modified by the end user based on their own needs. These are some of the most relevant features of this control system.

Horizontal Press Brake

Horizontal Press Brake PP200CNC

The versatility of the 20 Tons Horizontal Press Brake Nargesa PP200CNC allows us to bend, fold, cut and shape in cold, stretch and reduce, inlay, notch and assemble...

- **The new ECO mode** of our latest products saves energy and contributes to the conservation of the environment. Nowadays, we know the remarkable importance of saving energy. This is the main reason why our new machinery incorporates an "ECO mode" that automatically disconnects the electrical parts that generate greater energy consumption if a period of inactivity is detected. Thus, when it is necessary to restart the operation, all you have to do is press the pedal to continue working.

We strongly believe that this feature is a core point both for the savings of our clients and for the sustainability of our planet, since we are a company very committed to the environment.

- **Quick start-up:** The machine is shipped fully assembled, it is only required to connect it to the electrical supply and run it.
- **Versatility:** Nargesa PP200 has a catalog with a great deal of optional tooling.
- **Easy fabrication of tooling:** The customer himself or any toolmaker can manufacture dies and punches.

PP200CNC Automated Gauge

The automated gauge is an accessory specifically designed to get the most out of the PP200CNC Horizontal Press Brake, offering the possibility to get, automatically, the positioning of the "X" axis for the different operations programmed and calculated with the ESA S625 CNC control, thus improving the performance of operation and quality of work with this machine.

The automated gauge of the PP200CNC enables the user to make single or mass produced parts with top accuracy, speed and repeatability compared to the previous manual system. These are its main features and functions:

- Drive by ESA servomotor and HTD crowned belts that allow automatic positioning of the "X" axis with a precision of ± 0.02 mm.
- Manual adjustment of the cross slide, "Z" axis to cover all the operation possibilities offered by the PP200CNC horizontal press, folding, punching, bending...
- Longitudinal movements of both carriages using high-precision linear guides and recirculating ball runners.
- Automatic anti-collision control managed by the software itself.
- Easy mechanical and electrical installation for quick set up and run.

R axis

The R Axis is not supplied as standard with the machine; the client may include it when purchasing the machine or add it later. This Axis has a Canopen communication system that enables it to be installed in a rapid and simple manner to the machine. The operator needs only to connect it to the motor of the X axis and Nargesa's technicians will configure the CNC remotely.

Z1-Z2 axis

The Z1-Z2 axis enables us to optimize the set up time of the machine. The CNC optimizes the position of gauges Z1 and Z2 according to the dimensions of the piece and the position of the tools.

The parallelism of the gauge needles with the folding unit of the press brake fits automatically by means of micrometers to guarantee the maximum accuracy.

Power hammer

Power hammer PH50

In collaboration with some of the best blacksmiths in Spain, France and the United States, the Prada Nargesa engineers have designed a power hammer with all sorts of new advances in comparison to the other drop hammers on the market up until now. **Easier to manage, more precise, safer, quieter and with no need for any civil engineering work for installation in addition to many other features, it's the best choice available.**

Before purchasing a power hammer, a few basic details are needed before making a final decision:

BUILT-IN COMPRESSOR: The PH50 power hammer has a built-in compressor. This means, unlike with other brands, no external compressor is needed. A 50 kg or 110 lb power hammer without a built-in compressor would need a 5 HP external compressor.

NO NEED FOR SPECIFIC CIVIL ENGINEERING FOR INSTALLATION: Only 4 holes are needed in a concrete floor to insert the 4 chemical bolts that come with the machine when installing the PH50 power hammer.

WELDED STEEL FRAME: The machine frame is not casted; it's made of welded and die-cut steel. This reduces the possibility of cracking, as occurs with cast power hammers.

MAXIMUM CONTROLLED DROP PRECISION: We achieved maximum precision with the ability to even close a box of matches or position an egg and collide with it without breaking it.

LAPPED CYLINDERS DESIGNED WITH LOW-FRICTION TECHNOLOGY: The friction between the sleeve and piston is normally mechanical and through steel rings. This causes a risk of seizing up over time.

INTAKE AND EXHAUST MUFFLERS: Two mufflers, on the intake and exhaust, reduce the noise to xx dB.

AUTOMATIC LUBRICATION SYSTEM: The lubrication system on the PH50 power hammer features a completely transparent tank next to the power switch to monitor the level of oil in the container without having to use uncomfortable inspection peepholes.

DOUBLE MECHANICAL STOP PROTECTION: The piston on the front and pedal become completely mechanically blocked in an ideal position to easily and safely change the molds.

COLLECTING AND FILTERING OIL FROM THE AIR: The Nargesa PH50 drop hammer has a tank that collects this mix and separates the two components.

SAFET & CE MARKING: All of our machines are compliant with EC industrial machinery manufacturing standards.
