## 1. ACCESSORY DETAILS

1.1. Accessory Identification

| Make | NARGESA |
| ---: | :--- |
| Type of accessory | 2-axis positioner limit |
| Model | CC60 |

1.2. Dimensions

Figure 1. Outside dimensions of Pipe Bender Limit CC60

### 1.3. Accessory Description

The Non-Mandrel Pipe Bender Limit CC60 is an accessory specifically designed to position the pipe or profile during bending.

The CC60 limit makes it possible to produce serial parts faster with more precision and repetitiveness.

- Adjustable longitudinal positioning with 6 positions
- Angular head rotation every 5 degrees
- Adjustable four-hook tray for round and square pipes
- Longitudinal movement with high-precision linear guides
- Automatic anti-collision control
- Easy handling and preparation for complex parts

PRADA NARGESA $S . L$ is not liable for any damages that may be caused due to improper use or a breach of the safety rules by users.

### 1.4. General Characteristics

| Reference | $\mathbf{1 4 0 - 1 7 - 0 1 - 5 0 0 0 0}$ |
| :--- | ---: |
| Max. size round steel pipe | 60.3 mm or 2" Schedule-40 or 2" Gas $\times 4 \mathrm{~mm}$. |
| Max. size round steel through pipe | 42.4 mm or $11 / 4^{\prime \prime}$ |
| Max. angle of curvature | $-180^{\circ} / 0^{\circ} / 180^{\circ}$ |
| Dimensions | $3003 \times 897 \times 1131 \mathrm{~mm}$ |
| Weight | 125 Kg |

### 1.5. Machine Parts

## 2. TRANSPORT AND STORAGE

### 2.1. Transport

The limit should be moved as follows:

- Along the bottom through the pallet at the base of the box using a forklift or lift truck as indicated in the illustration. Never raise the limit more than 200 mm off the ground or it may tip over.

Figure 4. Moving the Limit

### 2.2. Storage Conditions

The Pipe Bender Limit may not be stored anywhere that does not meet the following requirements:

- Moisture of $30-95 \%$
- A temperature of -25 to $55^{\circ} \mathrm{C}$ or $75^{\circ} \mathrm{C}$ over periods not to exceed 24 hours (please remember these temperatures are for storage conditions)
- Do not pile heavy objects on top

## 3. MAINTENANCE

### 3.1. Greasing the Moving Parts

Keeping the moving parts on the limit clean is recommended to ensure proper operation and extend the service life.

To grease the limit skids on the CC60, simply grease all the limit greasers: $\mathbf{8}$ in all, every $\mathbf{3 0}$ days .

Front view

## Rear view

ATTENTION: To grease the Limit, you must stop the machine and press the "Emergency Stop" button.

## 4. LIMIT LOCATION AND INSTALLATION

### 4.1. Limit Location

Try to position the machine and limit in the proper location so they do not have to be moved; otherwise, follow the steps described in the Transport section (no. 2). Position over a smooth, level surface to prevent vibrations and movements during bending operations .

### 4.2. Dimensions and Work Area

Take the dimensions, limit work area and the lengths of any part to be worked into consideration when positioning the limit.
The pipe bender may be used by a single operator who must stand on the side of the limit to manage the adjustable stoppers and the pipe securing tray.
Before starting the bending process, the operator shall adjust the limit and secure the material while the machine is off.

Figure 6. Limit Work Area

ATTENTION: The limit moves while the machine does the bending. Do not place anything in the Limit work area that may obstruct its movement.

Figure 7. Layout

### 4.3. Acceptable External Conditions

- A room temperature of $+5^{\circ} \mathrm{C}$ to $+40^{\circ} \mathrm{C}$ without exceeding an average temperature of $+35^{\circ} \mathrm{C}$ over 24 hours.
- Moisture of 30-90\% without water condensation.

### 4.4. Installing the Limit

1. Install the vertical limit support by inserting it into the guides on the end and screw in.

2. Screw in the vertical support using the four screws.

3. Install the guide covers by firmly pressing. Use a plastic hammer if necessary.

ATTENTION: To secure the limit to the machine, you must stop the machine and press the "Emergency Stop" button.
4. Unscrew and remove the rear cover from the machine. Install the limit on the side of the machine indicated in the image. Remove the 8 screws supplied with the machine and screw the limit to it using the 8 screws supplied with the limit.

5. Pull the end of the inductive sensor cable from the inside towards the outside of the machine through the top of the shelf.

6. Level the machine on the two axles.

7. Level the limit on the two axles.

8. Adjust the height of the vertical support using the two adjustable legs, adjusting the limit to a level position.

9. Check that the limit is completely level before definitively securing it to the machine by tightening the 8 screws well.

10. Secure the two securing parts supplied with the limit to the ground.

11. Put on the rear cover and screw in the 8 screws.

12. Connect the machine inductive sensor cable by tightening it with the limit inductive sensor.

13. Place the inductive sensor in the limit chassis support and secure it with the bolt. Start the machine using the power switch.

14. Slide the longitudinal cart until the inductive sensor LEDs turn off. This means it was detected. Make sure the clamps do not collide with the machine in this cart position.

15. The following message appears on the control screen. Press $x$ so it will disappear.

16. Press to access the menu, then press Enter the password.

| Insert password |  |  |  |  |  |  |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| $44223311$ |  |  |  |  |  |  |  |  |  |  |  |  |
| Esc | 1 | 2 | 3 | 4 | 5 | 6 |  | 7 | 8 | 9 | 0 | <- |
| q | w | e | r | t | y |  | U | i | $\bigcirc$ |  |  | ] |
| Caps | a | s | d | f | g |  | h | j | k |  |  |  |
| Shift | z | x | c | v |  | b | n |  | m |  |  | Del |
| - | $=$ | , |  |  |  |  |  |  |  | / | £ | Enter |

17. Access the E/S menu and activate the backgauge limit switch. Press ${ }^{\prime \prime \prime}$ to return to the home screen. When the inductive sensor is working, the machine will automatically stop as soon as the longitudinal cart reaches this limit to prevent the cart from colliding with the machine.

| Inputs | Outputs |
| :--- | ---: | :--- |
| Connector 1 |  |

### 4.5. Adjusting the Limit

The bender switch CC60 is adjusted by our technicians before the machine is sent to the customer. However, you need to check and re-adjust the limit before working with it.

1. Insert a pipe measuring 1200 mm minimum in the limit as indicated in section 5.2. Securing the Pipe to the Limit. Use a marker to make a mark at 1000 mm on the other end of the pipe and place it in the main roller.

2. Place one of the adjustable stoppers at 100 mm and secure it.

3. Adjust the longitudinal cart with the stopper and loosen the screws in the adjustment guide.

4. Move the cart slowly until the mark on the pipe is lined up with the mark on the counter-shape and the main roller. Make sure the longitudinal cart and the stopper are still connected.

5. As soon as the mark on the pipe is lined up, tighten the screws on the adjustment guide and remove the pipe.

## 5. INSTRUCTIONS FOR USE

### 5.1. Limit Features and Use

The CC60 limit is used to position the pipe in an exact position for bending.

### 5.2. Securing the Pipe to the Limit

Secure the pipe to the securing tray by adjusting the clamps using the wrench supplied with the limit. Make sure the material is completely secured to the tray and in contact with the base of the tray.
To release the pipe, loosen the clamps using the wrench until the tray comes loose.

### 5.3. Installing the Through Pipe

If you use a pipe that is longer than 3000 mm , use the central opening on the securing tray so the material goes through it.

To install the through pipe, unscrew the two securing screws from the plate on the back of the securing tray .

Remove the plate and insert the pipe through the tray. Screw the pipe to the tray by tightening the clamps using the wrench.

Max. size round steel through pipe: 42.4 mm or 1 1/4"

### 5.4. Adjusting the Longitudinal Limits

The CC60 limit is equipped with 6 adjustable stoppers which can be adjusted. It includes a millimeter and inch ruler which shall be used to adjust the stoppers to the desired measurement. Secure the stoppers by screwing in the handle.

### 5.5. Adjusting the Cross Limit

Adjust the cross limit so the pipe is positioned parallel to the limit chassis.

Move the cross limit by unscrewing the two screws and moving the limit.

Use the ruler to position the limit to the same size as the radius of the main roller. As soon as it is in the correct position, secure it to the longitudinal cart by tightening the two screws.
Example: Set Matrix Diameter 40 mm Radius 120 mm . In this case, set the cross limit at 120 mm .

### 5.6. Adjusting the Pipe Rotation Angle

Adjust the rotation angle to the degrees at which the pipe will rotate. To define these degrees, loosen the corresponding screw a few millimeters without fully unscrewing the screw so the tray to be rotated stops at the chosen degrees.
